Convolution of a Two Boxes

Signal/Image

Filter

Result: Convolution of two boxes is a triangle

CS148 Lecture 14

Pat Hanrahan, Winter 2007

Mathematical Definition: Convolution

Signal x_i

Filter h_i

Convolution

$$y = h \otimes x$$

$$y_i = \sum_j x_j h_{i-j}$$

Basic Signal Processing

Sines and Cosines

Frequency

Frequency (cycles per interval) $f = \frac{1}{T}$

Angular frequency $\omega = 2\pi f = \frac{2\pi}{T}$

Spectral Representation

Functions may be represented as a sum of sin/cos

$$f(x) = \sum_i a_i \cos \frac{2\pi i x}{T} + b_i \sin \frac{2\pi i x}{T}$$

Cosines are Orthogonal

$$\int \cos \omega_i x \cos \omega_j x dx = \begin{cases} 1 & \omega_i = \omega_j \\ 0 & \omega_i \neq \omega_j \end{cases}$$

CS148 Lecture 14

Pat Hanrahan, Winter 2007

Fourier Coefficients

$$a_i = \int f(x) \cos\left(\frac{2\pi i}{T} x\right) dx$$

$$b_i = \int f(x) \sin\left(\frac{2\pi i}{T} x\right) dx$$

Power spectra: $F(\omega_i) = \sqrt{a_i^2 + b_i^2}$

CS148 Lecture 14

Pat Hanrahan, Winter 2007

Two Domains

Two representations of a function

- Spatial domain - normal representation
- Frequency domain - spectral representation

The *Fourier transform* converts between domains

CS148 Lecture 14

Pat Hanrahan, Winter 2007

Box Function and Sinc Function

Spatial Domain

Frequency Domain

$$f(x) \Leftrightarrow F(\omega_x)$$

CS148 Lecture 14

Pat Hanrahan, Winter 2007

The Box Function

$$\text{box}(x) = \begin{cases} 0 & x < -1/2 \\ 1 & -1/2 < x < 1/2 \\ 0 & x > 1/2 \end{cases}$$

CS148 Lecture 14

Pat Hanrahan, Winter 2007

The “Sinc” Function

$$\int_{-\infty}^{\infty} \text{box}(x) \cos 2\pi f x \, dx = \int_{-\frac{1}{2}}^{\frac{1}{2}} \cos 2\pi f x \, dx$$

$$\begin{aligned} &= \frac{\sin 2\pi f x}{2\pi f} \Big|_{-\frac{1}{2}}^{\frac{1}{2}} \\ &= \frac{\sin \frac{1}{2} 2\pi f - \sin -\frac{1}{2} 2\pi f}{2\pi f} \\ &= \frac{\sin \pi f + \sin \pi f}{2\pi f} \\ &= \frac{\sin \pi f}{\pi f} \end{aligned}$$

Convolution Theorem

Convolution

Definition:

$$h(x) = f \otimes g = \int f(x')g(x - x') dx'$$

Convolution Theorem: Multiplication in the frequency domain is equivalent to convolution in the space domain.

$$f \otimes g \leftrightarrow F \times G$$
